

Opportunity Radar

Most scholarship sites help you find opportunities. This one tells you whether you actually qualify for one, and whether it's safe to trust — as equal, connected features, not one bolted onto the other.

01 — ELIGIBILITY

Do I qualify?

Hard facts — deadline, nationality, education level — are checked with plain code, no AI guesswork. An LLM is only called when eligibility wording is genuinely ambiguous, and can check it against a student's real CV text instead of leaving it unconfirmed.

02 — TRUST

Can I trust it?

Every eligible listing is checked for scam risk using weighted red-flag detection plus real web-search evidence. The verdict is risk-framed ("Some Concerns," not "Scam"), and paired with a separate confidence score, so it never claims more certainty than the evidence supports.

Checked against 51 scholarship-related Actors already on the Apify Store: most are plain scrapers with no matching at all. The one real competitor with profile-based matching (Scholarship Intel) has no eligibility verification and no fraud detection, by its own documentation. Nothing found combines personalized matching with evidence-based trust scoring as equal features — that pairing is the actual gap, not a guess.
